

SAI VAMSI KOLLA

Senior QA Engineer | AI & Automation Testing | Guidewire |

Burnaby, BC | Canadian Citizen | +1 (587) 937-3146 | saivamsikolla@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

Guidewire-certified Senior QA Analyst with 7+ years of experience in Property & Casualty Insurance, **banking, and e-commerce**, with deep expertise in manual and automated testing, defect lifecycle management, and QA team coordination. Previously supported Peace Hills General Insurance. Proven ability to lead testing activities, collaborate with cross-functional teams, and deliver high-quality software solutions in Agile environments.

TECHNICAL SKILLS

API Testing: Postman, REST APIs, Swagger/OpenAPI

Test Automation: Playwright, Selenium WebDriver, Pytest, Page Object Model (POM)

Testing Methodologies: Functional, Integration, End-to-End, Regression, UAT, SIT, Smoke, Exploratory, Black-Box

Programming: Python, JavaScript

Tools & Infrastructure: JIRA, Rally, Confluence, Zephyr, AWS, Guidewire Cloud

Version Control: Bitbucket, GitHub

QA Leadership & Coordination: Test Planning & Estimation, Risk Assessment, Release Readiness Validation, Team Coordination

PROFESSIONAL EXPERIENCE

AI Quality Engineer

mimik, Vancouver

March 2026 – Present

- Served as the sole QA engineer, independently defining the end-to-end test strategy, test processes, and coverage approach for a novel on-device AI health application from the ground up.
- Designed and executed UI and API test cases across mobile and web platforms, validating user journeys, API contract accuracy, and on-device AI agent behavior under real-world conditions.
- Built the product's first automation framework (**Schemathesis + PyTest**) against the OpenAPI v3 Swagger, for reducing manual testing effort.
- Identified and tracked 109 defects across the full stack from HealthKit data ingestion to AI agent responses in an environment with no established QA baseline.
- Developed a Playwright + JavaScript automation framework with parallel test execution and structured reporting, reducing regression cycle time and establishing a repeatable, scalable coverage baseline for ongoing releases.
- Reviewed business requirements, prepared test scenarios, managed test data, and validated environment readiness to support successful SIT and UAT execution.

Test Lead (Client: Meta)

HCLTech, Vancouver

Aug 2025 – Feb 2026

- Coordinated daily testing assignments for a team of 20 offshore QA analysts, balancing workload based on priority, capacity, and delivery timelines.
- Monitored testing progress and provided status updates to stakeholders to ensure on-time execution.
- Collaborate closely with developers and AI engineers through structured daily summaries, directly supporting algorithm tuning and system stability improvements.
- Track and quantify score discrepancies between automated and manual validation, reducing average accuracy gaps from ~8% to 3–5%.
- Design, review, and execute end-to-end test cases spanning iOS/Android mobile platforms and Shopify integrations, validating seamless commerce journeys.
- Drive early defect detection by performing thorough bug investigation and Root Cause Analysis (RCA) in close partnership with development teams, advancing quality and reducing resolution times.
- Lead QA validation for AI-powered, agentic checkout systems, manually verifying autonomous agent behavior across 10–15 real-world e-commerce merchants daily.

Senior QA Analyst

Peace Hills General Insurance, Edmonton

Nov 2022 - Dec 2024

- Designed and executed 1,900+ test cases, identifying 975 defects before UAT and increasing test coverage by 40%.
- Validated end-to-end **Guidewire ClaimCenter** workflows including FNOL, coverage verification, reserves, and subrogation, ensuring accuracy and compliance across personal and commercial lines.
- Tested integrations between **ClaimCenter, PolicyCenter, BillingCenter, ProducerEngage, and CustomerEngage** portals, verifying data consistency and seamless policy-to-claims hand-offs.
- Developed detailed test plans, traceability matrices, and QA summary reports to maintain clear documentation for each release.
- Built and maintained a **Python + Selenium + Behave** automation suite that cut regression execution time, accelerating delivery cycles.
- Analyzed test execution trends and defect patterns to identify process bottlenecks and improve regression efficiency across multiple Guidewire releases.
- Tested insurance regulatory and financial compliance reports by validating claim settlement data and other financial reports in Guidewire DHIC (DataHub/InfoCenter) for accuracy and completeness.

QA Analyst

TELUS, Edmonton

Sept 2021 - Nov 2022

- Executed **SIT and A/B test validation** across 12 Agile sprints, ensuring feature variants met business acceptance criteria while reducing critical defects by 70%.
- Optimized 575 test cases and automated regression suites, cutting execution time for showcase and content management projects.
- Conducted risk assessments and root cause analysis on 200+ defects, proactively identifying software vulnerabilities and enhancing product stability.
- Collaborated with developers and BAs to resolve complex defects to improve product stability and reduce recurring issues.

Software Engineer – QA

Accenture, India

Mar 2016 - Aug 2019

- Recognized with the “Above & Beyond” award for QA innovation, technical leadership, and mentoring excellence in Guidewire transformation programs.
- Led QA efforts across **three major migration projects**, applying manual, automated, and integration testing strategies to reduce production defects by **40%** through early risk identification.
- Developed a hybrid test planning strategy that merged UI testing, API validation, and backend SQL checks, enabling full end-to-end software testing coverage across critical workflows.
- Implemented a **hybrid testing approach** combining **Selenium-based UI automation (Java, BDD)**, API validation, and backend SQL checks to achieve full end-to-end test coverage across critical workflows.
- Supported 30+ successful deployment cycles with 100% on-time releases by executing rigorous regression and integration testing across ClaimCenter, PolicyCenter, and ProducerEngage.
- Mentored junior QA engineers on **automation, test design, and defect analysis**, strengthening team capability and improving delivery consistency.
- Led defect triage discussions and coordinated issue resolution activities across QA, development, and business teams.
- Reviewed requirements and prepared comprehensive test strategies for Guidewire transformation initiatives.

EDUCATION & CERTIFICATIONS

Master of Science - Internetworking Technologies | University of Alberta | 2021

Bachelor of Technology - Information Technology | GITAM University | 2015

Certifications:

- ISTQB Certified Tester – Foundation Level (CTFL) | 2018
- Guidewire Certified Associate – Insurance Suite Analyst | 2024
- AWS Certified AI Practitioner (Early Adopter) | 2024
- ISTQB Advanced Test Automation Engineer (CT-TAE) | June 2025
