

SAI VAMSI KOLLA

Senior QA Engineer | AI Systems Testing | API Automation | Guidewire

Burnaby, BC | Canadian Citizen | +1 (587) 937-3146 | saivamsikolla@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFESSIONAL SUMMARY

ISTQB-certified Senior QA Automation Engineer with 8+ years of experience leading quality strategy across AI-powered applications and Property & Casualty Insurance platforms. Proven ability to establish QA processes from the ground up, define risk-based test strategies, build scalable UI and API automation frameworks, mentor QA teams, and drive release readiness in Agile and CI/CD environments.

TECHNICAL SKILLS

API Testing: Postman, REST APIs, Swagger/OpenAPI, Schemathesis, Property-Based Testing, Contract Testing

Test Automation: Playwright, Selenium WebDriver, Pytest, Requests, HTTPX, Page Object Model (POM), Parallel Test Execution, Test Reporting

Testing Methodologies: Functional, Integration, End-to-End, Regression, UAT, SIT, Smoke, Exploratory, Black-Box

Programming: Python, JavaScript

Tools & Infrastructure: JIRA, Rally, Confluence, Zephyr, AWS, Guidewire Cloud

Version Control: Bitbucket, GitHub

AI-Assisted Quality Engineering: Claude Code, Custom Claude Skills, Requirements-to-Test Workflow, Intent-Based Test Design, AI Agent Validation, AI-Assisted Test Generation.

QA Leadership & Coordination: Test Planning & Estimation, Risk Assessment, Release Readiness Validation, Team Coordination

PROFESSIONAL EXPERIENCE

AI Quality Engineer

mimik, Vancouver

March 2026 – Present

- Founding Quality Engineer for an AI-powered digital health platform, defining the end-to-end QA strategy, test architecture, and release validation process for distributed AI microservices.
- Built the product's first API automation framework using Python, Pytest, and Schemathesis, implementing property-based and contract testing against OpenAPI specifications covering microservices from HealthKit data ingestion to AI agent responses.
- Developed a Playwright + JavaScript automation framework with parallel test execution and structured reporting, reducing regression cycle time and establishing a repeatable, scalable coverage baseline for ongoing releases for web apps.
- Reviewed business requirements, prepared test scenarios, managed test data, and validated environment readiness to support successful SIT and UAT execution- with zero pre-existing QA baseline.
- Partnered closely with software engineers and data scientists to validate AI model integration, investigate production issues, perform root cause analysis, and improve overall system reliability.
- Created reusable Claude Code skills and AI-assisted workflows to transform requirements, OpenAPI specifications, READMEs, and technical documentation into test strategies, intent models, testing obligations, and comprehensive test cases across two automation repositories.

Test Lead (Client: Meta)

HCLTech, Vancouver

Aug 2025 – Feb 2026

- Led QA validation for AI-powered, agentic checkout systems—manually verifying autonomous agent behavior across 100–150 real-world e-commerce merchants daily.
- Coordinated daily testing assignments for a team of 20 offshore QA analysts, balancing workload by priority and capacity to ensure on-time execution.
- Tracked and quantified score discrepancies between automated and manual validation, reducing average accuracy gaps from ~40% to 5%.
- Designed, reviewed, and executed end-to-end test cases spanning iOS/Android mobile platforms and Shopify integrations, validating seamless commerce journeys.
- Drove early defect detection by performing thorough bug investigation and Root Cause Analysis (RCA) in close partnership with development teams, advancing quality and reducing resolution times.

Senior QA Analyst

Peace Hills General Insurance, Edmonton

Nov 2022 - Dec 2024

- Drive early defect detection by performing thorough bug investigation and Root Cause Analysis (RCA) in close partnership with development teams, advancing quality and reducing resolution times.
- Designed and executed 1,900+ test cases, identifying 975 defects before UAT and increasing test coverage by 40%.
- Validated end-to-end Guidewire ClaimCenter workflows including FNOL, coverage verification, reserves, and subrogation, ensuring accuracy and compliance across personal and commercial lines.
- Tested integrations between ClaimCenter, PolicyCenter, BillingCenter, ProducerEngage, and CustomerEngage portals, verifying data consistency and seamless policy-to-claims hand-offs.
- Developed detailed test plans, traceability matrices, and QA summary reports to maintain clear documentation for each release.
- Built and maintained a Python + Selenium + Behave automation suite that cut regression execution time by 10%, accelerating delivery cycles.
- Analyzed test execution trends and defect patterns to identify process bottlenecks and improve regression efficiency across multiple Guidewire releases.
- Tested insurance regulatory and financial compliance reports by validating claim settlement data and other financial reports in Guidewire DHIC (DataHub/InfoCenter) for accuracy and completeness.

QA Analyst

TELUS, Edmonton

Sept 2021 - Nov 2022

- Executed SIT and A/B test validation across 12 Agile sprints, ensuring feature variants met business acceptance criteria while reducing critical defects by 70%.
- Optimized 575 test cases and automated regression suites, cutting execution time by 30% for showcase and content management projects.
- Collaborated with developers and BAs to resolve complex defects to improve product stability and reduce recurring issues.

Software Engineer – QA

Accenture, India

Mar 2016 - Aug 2019

- Recognized with the “Above & Beyond” award for QA innovation, technical leadership, and mentoring excellence in Guidewire transformation programs.
- Led QA efforts across three major migration projects, applying manual, automated, and integration testing strategies to reduce production defects by 40% through early risk identification.
- Implemented a hybrid testing approach combining Selenium-based UI automation (Java, BDD), API validation, and backend SQL checks to achieve full end-to-end test coverage across critical workflows.
- Supported 30+ successful deployment cycles with 100% on-time releases by executing rigorous regression and integration testing across ClaimCenter, PolicyCenter, and ProducerEngage.
- Mentored junior QA engineers on automation, test design, and defect analysis, strengthening team capability and improving delivery consistency.
- Led defect triage discussions and coordinated issue resolution activities across QA, development, and business teams.
- Reviewed requirements and prepared comprehensive test strategies for Guidewire transformation initiatives.

EDUCATION & CERTIFICATIONS

Master of Science, Internetworking Technologies | University of Alberta | 2021

Bachelor of Technology, Information Technology | GITAM University | 2015

Certifications:

- ISTQB Certified Tester – Foundation Level (CTFL) | 2018
- Guidewire Certified Associate – Insurance Suite Analyst | 2024
- AWS Certified AI Practitioner (Early Adopter) | 2024
- ISTQB Advanced Test Automation Engineer (CT-TAE) | June 2025
